Education

Indian Institute of Information Technology Kottayam

November 2022 – May 2026

Bachelor of Technology in Computer Science and Engineering

Experience

SIRI GROUP

Dec 2024-Jan 2025

SDE INTERN

Bangalore

- Built and deployed a scalable full-stack retail management platform (React, Node.js, MongoDB, Docker) to digitize inventory and billing, improving operational efficiency by 35%.
- Optimized backend APIs and MongoDB performance using indexing and aggregation pipelines, reducing latency by 60% and enabling high-throughput real-time transactions.
- Implemented CI/CD pipelines and automated testing (JUnit, Selenium, GitHub Actions) with 90%+ code coverage, and contributed to RESTful microservices architecture using Docker, Kubernetes, and Agile practices.

Projects

Next-Gen Governance — AI Complaint Management System | *LLM, React, CSS, Python, JS*

[Github](#)

- * Designed and deployed an LLM-powered complaint management system for urban and rural governance, enabling intelligent issue classification and prioritization through fine-tuned LLaMA 3.1, custom LLMs, and BERT with 95.23% accuracy.
- * Accelerated model training 4× using CUDA, exposed inference via REST APIs with modular SOLID architecture, and ensured reliability through unit/integration testing, logging, and documented reusable AI workflows.

Campus-Concern | *React, Node.js, Express.js, MongoDB, Vite, Axios*

[Github](#)

- Developed a scalable full-stack complaint management system with role-based workflows (Admin, Technician, Verifier, User), enabling secure complaint registration, tracking, and resolution across the platform.
- Implemented secure authentication, optimized MongoDB-backed APIs, and a responsive React + Vite frontend, reducing response latency by 30% and delivering a fast, device-friendly user experience.

Splitr -Expense Splitting & Settlement Platform | *React, Next.js,Convex, Clerk,CSS*

[Github](#)

- Developed a full-stack expense sharing application enabling group creation, expense tracking, balance calculation, and settlements, with secure authentication (Clerk) and API-driven data operations using Convex queries and mutations.
- Designed and consumed scalable backend APIs for expenses, groups, users, and settlements, integrated event-driven workflows (Inngest), and built a responsive Next.js frontend ensuring data consistency and role-based access.

Technical Skills

Languages: Java , Python, JavaScript, C/C++

Frontend: React,Angular, HTML, CSS, Tailwind CSS,Bootstrap

Backend: Node.js, Express.js,Next.js, REST API,Flask, MySQL, MongoDB,Spring Boot

Testing: JUnit, Selenium, Postman

DevOps &Tools: Git, GitHub, CI/CD, Docker, Kubernetes, Linux, AWS, WebSockets

Practices:Agile/Scrum,SDLC, OOPS, SOLID,Clean architecture,SAP tools, Code reviews, Debugging, Documentation, ,Collaboration

Relevant Coursework

Object-Oriented Programming System

Database Management Systems

Computer Networks

Data Structures and Algorithms

Software Engineering

Operating Systems

ACHIEVEMENTS

- Led a team to qualify for the Smart India Hackathon (SIH) at the college level, showcasing leadership, teamwork, and problem-solving skills.
- Collaborated with cross-functional stakeholders to deliver 4+ enterprise-grade solutions through SDLC-driven implementation cycles, showcasing consulting mindset and delivery ownership.
- Delivered 4 plus full-stack AI/ML projects independently, showcasing innovation, end-to-end ownership, and scalable architecture.
- Solved over 400 plus coding questions across various platforms, strengthening programming proficiency, analytical thinking, time management, and communication skills.
